

# TIPS FOR MANAGING AIR LIQUIDE CYLINDERS RESPONSIBLY!

A cylinder is a high-value asset purchased by Air Liquide Canada to provide a safe storage vessel for your cylinder gas requirements.

Once rented from Air Liquide Canada, it is your responsibility to maintain the cylinder in good condition and return it to an authorized location. Below are some tips to help you manage Air Liquide cylinders responsibly.

## **DO NOT LEND YOUR CYLINDERS TO OTHERS**

When you take possession of a cylinder, that cylinder is your responsibility. Lending out the cylinder to other people or different departments within your company does not free you from the obligations you agreed to when renting your cylinder.

## **CYLINDERS RENTED TO YOU ARE UNDER YOUR RESPONSIBILITY**

Renting a cylinder from Air Liquide Canada is an agreement that the cylinder will be returned in good condition and to an authorized location. Avoid cylinder damage fees by properly using and storing the cylinders.

## **RETURN YOUR EMPTY CYLINDERS**

Rent or lease charges will continue to be charged until you return your cylinders to Air Liquide. If cylinders are no longer in use, return them and save on rental fees.

## **NEVER DROP OFF A CYLINDER WITHOUT GETTING A RECEIPT**

Every time you drop off a cylinder at one of our depot locations or Air Liquide stores, it is important to receive a copy of the return documents for future reference.

- Keep these documents in your records for future referral in situations of cylinder balance discrepancies.
- Never return a cylinder without obtaining a receipt – this means avoiding a drop off to unmanned locations where no one can witness and record your cylinder return.

## **CYLINDERS ARE POTENTIALLY DANGEROUS**

They must be handled properly and in accordance with prescribed safety procedures. Be aware of potential dangers of operating a cylinder inappropriately.
